

## How set up a Capture Advance NVR/DVR to record on motion detection only

Follow the steps below outlining how to set a Capture Advance NVR or DVR to record on motion only.

1. Log in to the Capture Advance NVR/DVR.
2. Go to [Settings](#) > [Record](#) > [Record Schedule](#). Select the channel and make sure that [Enable Record](#) is turned on.
3. On the right-side of the screen click the green box for [Motion](#).
4. Set your preferred schedule in the schedule block. Then, click [Apply](#).
5. You can also copy the setting to other channels by clicking [Copy](#) > [select the channels](#) > [OK](#). Click [Apply](#) to complete the process.

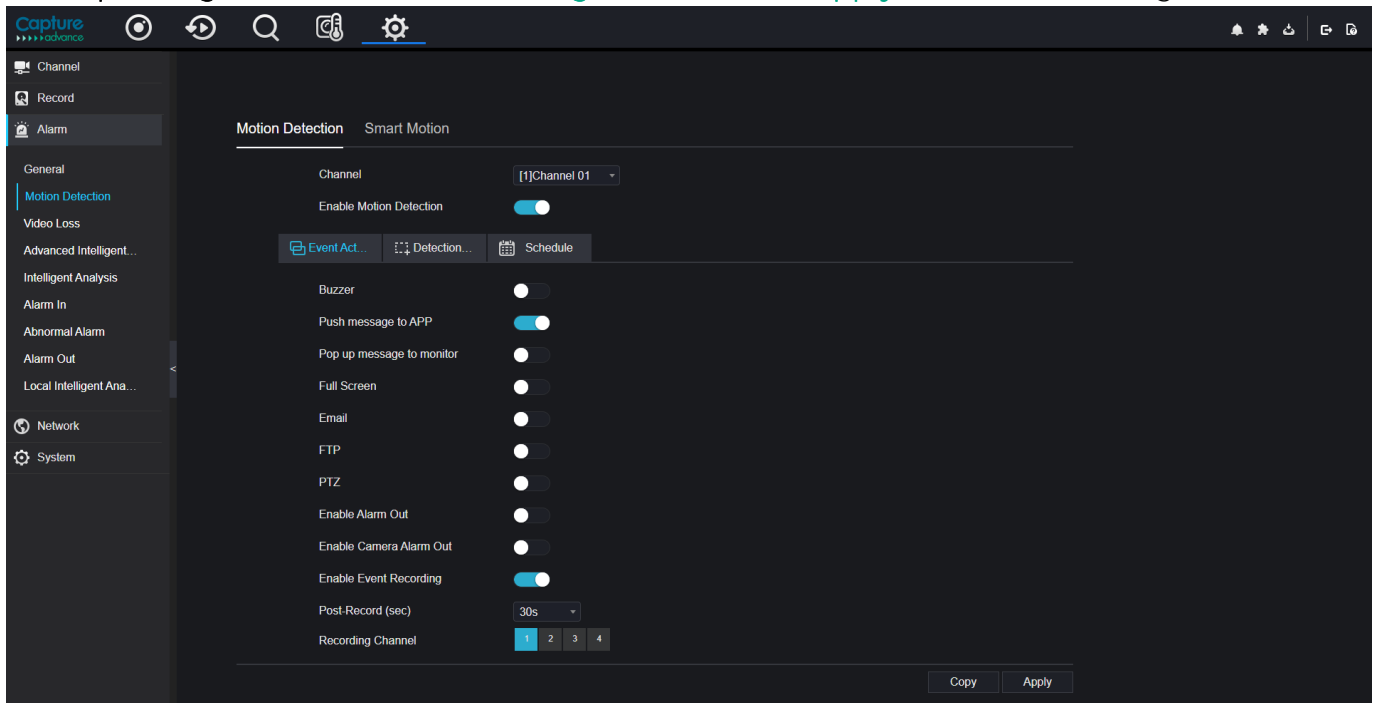

6. Go to **Alarm > General**. Make sure that **Enable Alarm** is on.

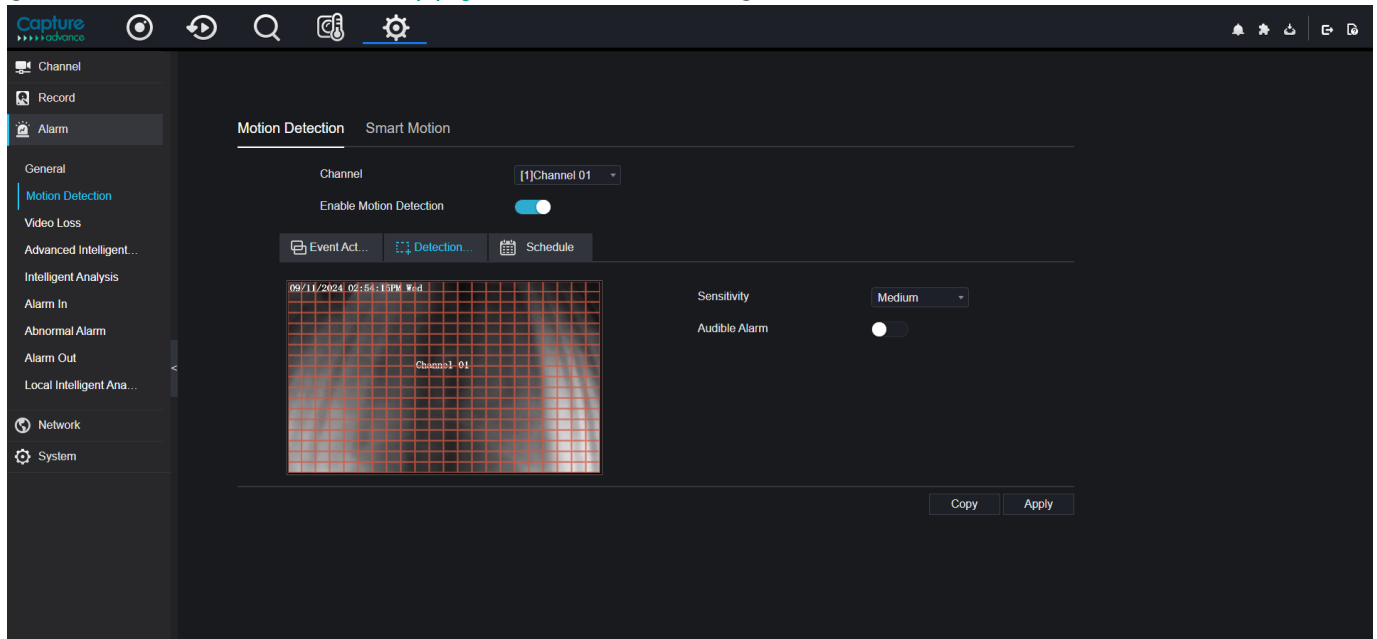

7. Go to **Motion Detection > select the channel** and turn on **Enable Motion Detection**.

8. Under **Event Actions**, make sure to turn on **Enable Event Recording** and select the corresponding channel under **Recording Channel**. Click **Apply** to save the setting.

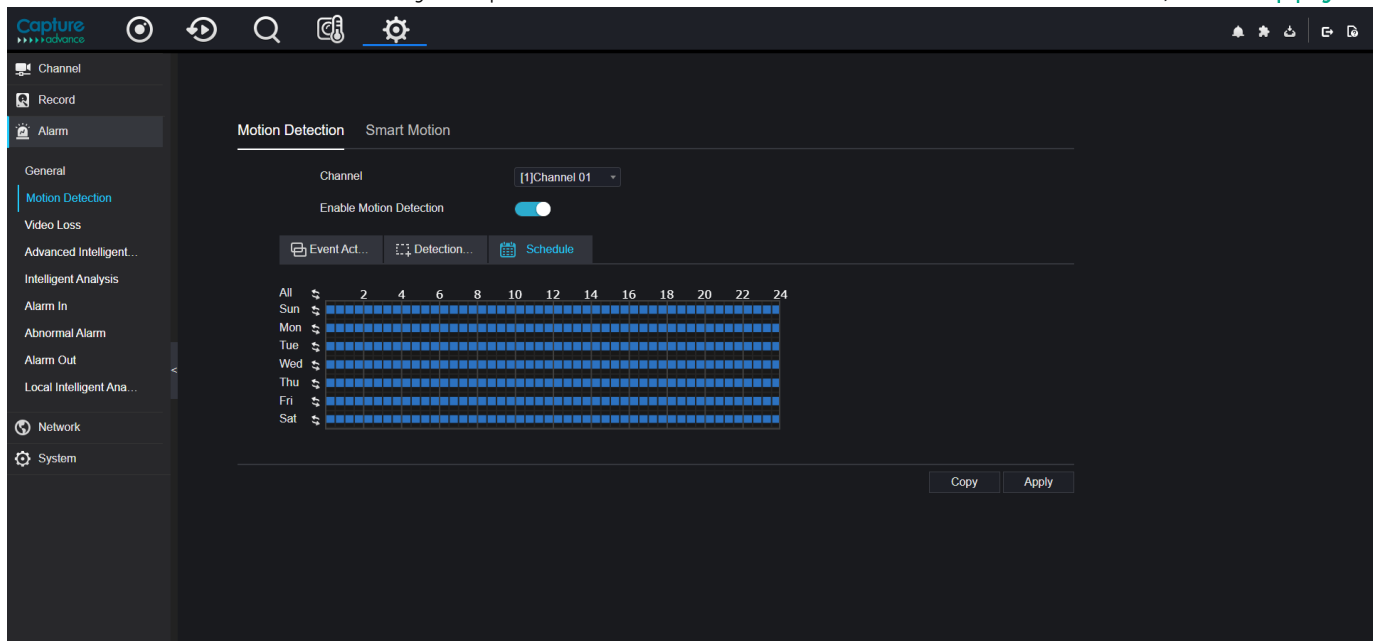

9. You can also copy the setting to other channels by clicking **Copy** > select the channels > **OK**. Click **Apply** to complete the process.

- Go to the **Detection Area** tab. Draw the detection area and set the **Sensitivity**. Area with red grid means selected. Click **Apply** to save the setting.

- You can also copy the setting to other channels by clicking **Copy** > select the channels > **OK**. Click **Apply** to complete the process.
- Go to the **Schedule** tab. Set your preferred schedule in the schedule block. Then, click **Apply**.

- You can also copy the setting to other channels by clicking **Copy** > select the channels > **OK**. Click **Apply** to complete the process.
